Education

Clark University

Worcester, Massachusetts

PhD in Economics

2021-2026 (Expected)

- Unproposed Dissertation: Quantitative Analysis on Spatial Distribution of Firms and International Trade
- Advisor: Dr. Junfu Zhang (Chair) and Dr. Kensuke Suzuki

Clark University

Worcester, Massachusetts

MA in Economics

2021-2023

- Master en route to PhD
- Advisor: Dr. Junfu Zhang

Shanghai University

Shanghai, China

MA in Economics

2018-2021

- Dissertation: FDI and Survival of Host Country Enterprises: Evidence from Firm Registry Data
- Advisor: Dr. Qiangyuan Chen

University of Toronto

Toronto, Ontario

International Visiting Graduate Student

2019-2020

- Joint Program with Shanghai University
- Advisor: Dr. Yao Luo

Shanghai Ocean University

Shanghai, China

BA in Economics

2014-2018

- First-Ranked GPA in Major (International Trade) and Qualified Postgraduate Recommendation

Selected Papers

Main

Trade and Spatial Distribution of Firms: Quantitative Analysis of Chinese Manufacturing, in progress

with Kensuke Suzuki and Junfu Zhang

Abstract: This paper studies the determinants of the spatial distribution of economic activities in China. Specifically, we focus on the different patterns of sectoral growth across Chinese provinces in the last two decades, followed by a series of dramatic policy reforms, including trade liberalization, infrastructure development, productivity growth, and relaxation of mobility restrictions for workers. To understand how those factors interact with each other to shape the spatial distribution of economic activities across regions and sectors, we develop a spatial general equilibrium model of international trade in the spirit of the Melitz-Chaney framework. We extend the heterogeneous firm model to a multi-sector and multi-region setup, incorporating rich sectoral and regional interactions. We bring the model to the data for the Chinese economy and simulate the counterfactual equilibria to account for the underlying mechanism of regional development.

Trade Shock and Dynamic Labor Allocation, in progress

Abstract: The early 21st century saw the U.S. economy undergoing a profound structural shift, driven by the “China shock” following China’s accession to the WTO. This trade shock initially significantly affected U.S. manufacturing, causing widespread job losses and economic disruption. However, contrary to expectations, the shock also accelerated the growth of the service sector, which emerged as a primary driver of economic expansion. A key mechanism behind this transformation was reducing labor relocation costs, enabling workers—particularly those with lower education levels—to switch industries and maximize their life utility. This adjustment not only offset the negative effects of the trade shock but also contributed to a re-optimization of labor market allocation. To understand this counterintuitive outcome, we develop a dynamic spatial model grounded in the frameworks of CDP and ACM. Our model integrates declining labor relocation costs with heterogeneity in workers’ education levels and labor mobility. Numerical exercises using a toy model show that reducing labor

relocation costs allows more low-educated workers to transition into the service sector. These findings highlight the critical role of declining labor relocation costs in mitigating trade shock impacts and achieving an optimal labor market allocation.
